Backend and **DevOps** focused engineering student specializing in **Java**, Spring Boot, and **cloud-native platforms**. Hands-on experience in **software development**, **containerization**, and Infrastructure as Code **(IaC)** using **Terraform**. Experienced working across IT environments with **AWS**, and **GCP**. Strong interest in **scalable systems**, **content delivery**, **scripting**, **automation**, **system administration**, and **site reliability** engineering. Seeking Backend / DevOps / SRE roles.

Work Experience

Jr. Software Engineer Intern — Sep 2025 - Dec 2025

Novas Arc | Hyderabad

- Built AWS CI/CD pipelines that **automated build, test, and Docker image deployment**, reducing manual deployment **effort by ~60–70%.**
- Collaborated with DevOps engineers to **right-size EC2 instance usage and CloudWatch** dashboards, improving system performance and **reducing monthly cloud costs**.
- Created and managed **5–6 CI/CD pipelines** across **production, test, and QA** environments, automating build, test, and deployment workflows.

Network Technician Intern — Jun 2025 - Jul 2025

Cisco Networking Academy | PAN INDIA

- Configured SOHO networks, DHCP, and **IP addressing** schemes in lab environments, gaining hands-on experience with **routing, switching**, and basic network security.
- Knowledgeable in DHCP, IPv4 and IPv6 addressing, networking standards and protocols.
- Learned Core **Networking Fundamentals**, Protocols, Routing & Switching, Security, Reliability & Performance.

Projects

Distributed ML Compute Marketplace - Ongoing (Java, HttpClient, SpringBoot, Docker, PostgreSQL, React.js)

- Designed and built a **distributed compute platform** where users submit **machine learning workloads** executed in **isolated Docker containers**.
- Implemented **automated containerization pipeline** to package user-submitted ML model into runnable **Docker images**.
- Developed a **job scheduling and execution service** to run workloads on available compute nodes and manage job lifecycle states (PENDING, RUNNING, SUCCESS, FAILED).
- Integrated Razorpay **payment gateway** for per-job billing with wallet-based credits and automated charge calculation.

Journal Application (Spring Boot, Kafka, MongoDB, Redis, AWS)

- Built a **cloud-native journal application** using Spring Boot microservices and event-driven architecture with Kafka.
- Integrated **MongoDB** Atlas and **Redis** for data persistence and caching, improving **API** response time.
- Deployed the application using **Docker and CI/CD pipelines**.
- Integrated a third-party **Weather API** to enrich journal entries with real-time data.

Technical Skills

- Languages & Scripting: **Java, Python**, **Bash, JavaScript**.
- Backend Software Development: **Spring Boot, RESTful APIs**, and **Microservices.**
- Frontend Development: **HTML, CSS, React.js**
- Cloud Platforms: **AWS** (EC2, S3, IAM, CloudFront, CodePipeline), GCP, Oracle Cloud**.**
- DevOps & IaC: **Terraform, Docker**, **Kubernetes.**
- System Administration: **Linux,** Server Hardening**.**
- Monitoring: **Prometheus, Grafana.**
- Databases: **PostgreSQL**, **MongoDB**.
- Version control: **Git, GitHub, CodeCommit.**
- Computer Science Fundamentals: **Data Structures, Operating Systems, Computer Networks, OOP, DBMS.**

Certificates

AWS Cloud Solutions Architect – Amazon Web Services
Oracle Certified Foundations Associate - Oracle
Network Technician Career Path – Cisco Networking Academy
Continous Delivery & DevOps– University of Viriginia
Advanced React – Meta

Education

Bennett University — Aug 2024 - Aug 2028

Bachelor of Technology Computer Science & Engineering (Specialization: Cloud Computing)
